Research Application

VHA

- I. Research objectives and specific aims
- II. Background and Work Accomplished
- III. Significance
- IV. Methods
- V. Protection of human subjects
- VI. Project management plan

NIH

- I. Specific aims
- II. Background and Significance
- III. Preliminary studies
- IV. Research design
- V. Analysis by aim
- VI. Sample size
- VII. Logistics
- VIII. Limitations
- IX. Summary

◦
◦
◦

Before Getting Started

- Carefully know what you are going to do before you start writing
- Talk to experts and collaborators, have meetings, make informed decisions
- Sketch out the design, think through the details
- Outline the major sections and subsections

◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦

◦
◦
◦

Writing Tips

Get organized, stay organized:

- Use Sections (subsections, subsubsections, subsubsubsections)
- Use Tables for lists of variables, ideas, procedures
- Use Figures for complex procedures

◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦

◦
◦
◦

Writing Tips

- Give enough, but not too much detail:
- Tie decisions to specific aims
- Justify decisions (balance science with feasibility)
- Use generally accepted methods whenever possible and appropriate

◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦

◦
◦
◦

Writing Tips

- Carefully describe new or controversial approaches, and give data to support their use
- Put questionnaires in appendices
- Focus on science, not process!

◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦

◦
◦
◦

Experimental Design

General questions about data to address:

- Are the data you propose to collect going to allow you to address the specific aims?
- Can you collect these data?

◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦

◦
◦
◦

Outline of Methods Section

Components:

- Overview
- Overall Design
- Study Population
- Recruitment

◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦

◦
◦
◦

Outline of Methods Section

Components:

- Measurements (Exposures, Outcomes, other variables, etc.)
- Specimen collection
- Follow-up plan
- Data management

◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦

◦
◦
◦

Outline of Methods Section

Components:

- Quality Assurance
- Analysis plan
- Sample Size
- Power

◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦

◦
◦
◦

Outline of Methods Section

Components:

- Human subjects issues
- Limitations
- Infrastructure

◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦

◦
◦
◦

Outline of Methods Section

Additional components for trials:

- Intervention / Treatment
- Other Measures: Compliance, side effects
- Data and safety monitoring

◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦

◦
◦
◦

Overview

Give complete synopsis of study in one paragraph

- What kind of study (design)
- Who (participants)
- Procedures (recruitment, treatment)
- Data collected (key variables)
- Analysis (specific aims)
- Power (sample size)

◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦

◦
◦
◦

Design

Study Types

- Descriptive
- Case-Control
- Cohort
- Nested case-control
- Trial

◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦

◦
◦
◦

Design

Descriptive Study

- Surveys, cross-cultural comparisons, temporal trend
- Exposure and outcome data generally collected simultaneously
- Example: Seven Countries Study

◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦

◦
◦
◦

Design

Descriptive / Survey

- Advantages: Low cost, often short time frame
- Disadvantages: Limited ability to adjust for confounding, often limited number of exposures and outcomes
- Generally reserved for hypothesis generation

◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦

◦
◦
◦

Design

Case-control

- Definition of case and source
- Definition of controls and source
- Exposure data collected retrospectively
- Example: Boston Area Health Study of MI cases and community matched controls

◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦

◦
◦
◦

Design

Case-control

- Advantages: Shorter time frame and lower cost than a cohort study, can study many exposures in detail
- Disadvantages: Can study only one disease outcome, subject to selection and recall bias
- Example: Pancreatic cancer and coffee

◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦

◦
◦
◦

Design

Cohort

- Recruitment effort is not trivial
- Exposure data collected or available before outcomes
- Endpoints collected over time
- Examples: Framingham Heart Study, Nurses Health Study

◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦

◦
◦
◦

Design

Cohort

- Advantages: Minimizes selection and recall bias, can study many outcomes and many exposures simultaneously
- Disadvantages: Can be expensive and of long duration, power can be lower than expected (healthy volunteers)

◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦

◦
◦
◦

Design

Nested Case-Control

- Design can have features of cohort studies or of classical case-control studies.
- Careful attention to these issues should be made when describing the study to avoid confusion.
- Examples: PHS: CRP and MI; NHS; Breast Cancer and fat intake.

◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦

◦
◦
◦

Design

Trials / Experimental

- Design is generally simple but can be complex (e.g., factorial)
- Recruitment issues can be complex
- Treatment (agent, dose, blinding, program, theoretical model)
- Randomization (simple, blocked, adaptive)

◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦

◦
◦
◦

Design

Trials / Experimental

- Follow-up
- Consent issues
- Monitoring
- Examples: Physicians Health Study, VA HIT

◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦

◦
◦
◦

Design

Trials / Experimental

- Advantages: Minimizes bias and confounding, can accurately measure effect sizes
- Disadvantages: Logistically difficult, long time frame, expensive

◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦

◦
◦
◦

Study Population

Define the ideal study population based on the science

- Representation: Age, Sex, Race/ethnicity
- Health status: Can they participate, will they live long enough to contribute information?
- Exposures: Should you over-sample?
- Special inclusion/exclusion criteria

◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦

◦
◦
◦

Recruitment Strategy

Design the recruitment strategy with an eye toward feasibility.

- Where will the subjects come from?
- How much effort will be expended in recruitment?
- What are the response and willingness rates?

◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦

◦
◦
◦

Source

Survey research

- Random-digit dialing
- Mass mailing
- Defined population lists

◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦

◦
◦
◦

Source

Case-control studies

- Physician referral, disease registries, pathology reports, hospital records
- Random-digit dialing, neighborhood, hospital

◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦

◦
◦
◦

Source

Cohort studies

- Population-based lists (drivers, voters)
- Defined populations (military, school, large industry, unions, licensed professionals)
- Health-related lists (HMO, insurance, Medicare)

◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦

◦
◦
◦

Source

Trials

- Physician referral
- Advertising
- Lists

◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦

◦
◦
◦

Recruitment Strategy

Approach

- Letter
- Phone
- Physician
- Door-to-door
- Advertising

◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦

◦
◦
◦

Recruitment Strategy

Response/participation/randomization rates

- Quantitative estimate
- Access to sufficient numbers?
 - multi-site study
 - more years to recruit
 - relax inclusion/exclusion criteria
 - decrease participant burden
 - pay money

◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦

◦
◦
◦

Recruitment Strategy

Do you need multiple sites?

Site Selection

- Organize site recruitment
- Consider application process
- Evaluate prior experience
- Consider potential recruitment pool
- Consider minority recruitment sites

◦ ◦ ◦ ◦ ◦ ◦ ◦ ◦
